

## Fortified Prevention of Delayed Submission or Failure to Submit Harm/risk Prevention Proposal in Manufacturing Industry

Conducting of Measures to Prevent Late or Non-submission of Proposal and Find  
Businesses that Have Not Submitted Their Proposal

### Program

- Review and Verification of Harm/risk Prevention Proposal (Manufacturing Industry, etc.)

### Major changes

- Fortified prevention of late/non-submission of proposal and discovery of non-submitting businesses.
- Program increases businesses awareness of the proposal submission system through diverse PR activities/notifications. Program's plan has been carefully revised/supplemented to ensure that increased discovery of non-submitting businesses decreases non-submissions.
- KOSHA to be responsible for PR and sending cooperation requests to safety and health agencies, private consignment companies, and safety inspection institutions to reduce the workload of inspection-receiving businesses.

### Preliminary procedure

Prevention of delayed or non-submission of proposal

Step 1	Step 2	Step 3	Step 4	Step 5
Conduct PR via diverse mediums (safety and health periodicals, newspapers, electronic displays, leaflets/OPS, etc.).	When carrying out a program, request that partner/related institutions notify employees of the proposal submission system.	Ask local governments, when issuing consent/permit for construction project, to inform partners (if relevant) of the need to submit a proposal.	Issue confirmation form to businesses that ask whether they are required to submit a proposal.	Engage in consistent discussion through Seumter, provide notifications on submission process, and continue to track/monitor businesses that are required to submit a proposal (including those whose status is "pending").

### Follow-up procedure

Discovery of non-submitting businesses

Step 1	Step 2	Step 3	Step 4	Step 5
Ask safety and health agencies and private consignment companies to report non-submitting businesses to KOSHA.	Ask safety inspection institution to report to KOSHA any discoveries of exhaust systems for which a proposal has not been submitted.	Ask businesses that have recently applied for occupational accident insurance to submit <b>questionnaire for businesses that are required to submit a proposal.</b>	Check whether businesses that recently signed an electricity contract with KEPCO have submitted their proposal.	Find non-submitting businesses by conducting patrol checks or working with locally-specialized programs/companies.

- Improved effectiveness of accident/death prevention system.
  - Follow-up management via patrol checks (as done during program's trial operation) to overcome the limitations of a single check.
- ↳ Inspection conducted on whether businesses (those that have moved or constructed a new facility and/or have fewer than 50 employees) whose 2019 proposals were approved are actually implementing the safety and health measures stated in their proposal.
- ↳ Fee required to address factors that introduce high-risk of accidents/death (e.g. dangerous machinery and outdated processes) to be linked with KOSHA's financial support program.
